

Three different markets. One identical dataset.

WORLD A

A prices faster; plumbing matches

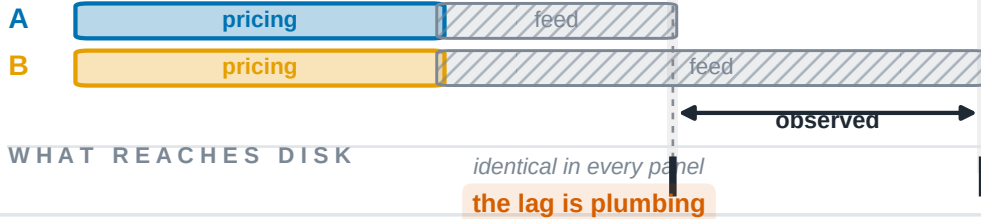

THE MECHANISM

WORLD B

identical pricing; B's feed is slower

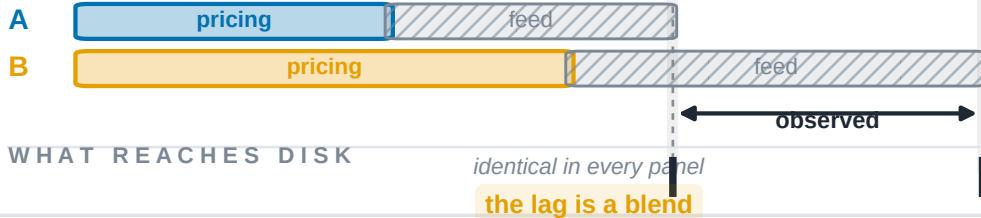

THE MECHANISM

WORLD C

both differ, and partly cancel

THE MECHANISM

The bars differ in every panel; the two recorded timestamps do not. Read the strip along the bottom of each panel: what reaches disk is the same in all three, so no statistic computed from it can tell these worlds apart.
